

Making patient information available when you need it most

Mercy Health Partners (MHP) has everything physicians need to help serve their patients better, while improving their work/life balance.

Since 2004 Mercy Health Partners (MHP) has provided DOCView physician portal as a comprehensive and accessible viewing tool for patient information. This information includes:

- Lab Results
- Radiology Results
- Transcribed Reports
- EKG's
- PACS Images
- Medication profiles
- Medication administration records
- Vital signs
- Intake and Output
- Post discharge electronic medical record
- Electronic Chart Signature
- Emergency Department Electronic Medical Record (EMR)
- Allergies
- Medication Reconciliation

While still providing service through HealthBridge, MHP is now providing two new services DX View via HealthBridge and **Mercy MD Advantage**.

DX View is a medical imaging review tool that enables physicians to view PACS images from any PC that has Internet access.

DX View provides all the tools physicians have seen in MI View with enhanced features:

- More tools for image manipulation
- User interface is closer to what is seen on the normal PACS workstation

Mercy MD Advantage allows physicians to view patient information in the palm of their hands from any location. Not only can physicians view data from a Blackberry, it can also be used as a pager, cell phone, email, calendar and has internet access. Patient data available via **Mercy MD Advantage** includes:

- Lab Results
- Transcribed Reports
- Medications
- Medication administration
- Vital Signs

For physicians who are interested in **Mercy's MD Advantage** and who round on patients at MHP facilities please email: Docview@health-partners.org
